Abstract

In order to reduce the phenomenon of katakana word avoidance among Chinese learners of Japanese , I have developed EULIKO (a system for Encouraging Use and Learn of Imported-words' Katakana-Orthography: pronounced "ユリコ"). We proposed the hypothesis that this system would reduce the phenomenon of katakana word avoidance among Chinese learners of Japanese, This paper conducted preliminary and main experiments. Preliminary interviews suggested that the system may be effective; through the results of the main experiment and independent tests, the avoidance phenomenon of the experimental group could be reduced as originally hypothesized; the effectiveness of the EULIKO system was suggested.
