Keywords: Practice community, Domain, Community, Practice, Learning system, Man principle, Economic rationality principle, Specification statement community of success

First of all, the concept of 'Practice community' was understood from the review of the earlier literature 'Community Ob practice'. The concern, the problem, and zeal, etc. concerning a certain theme are shared, and the special, high knowledge and skill are defined that it is a community that deepens through continued cross hauling , saying that 'Practice community'. It is important to understand three elements of 'Domain', 'Community', and 'Practice' of knowledge to form, and to bring up the practice community in the organization. It is because these elements become essential of 'Practice community'. The function and the structure were analyzed as an example of the one thing of the community for 'Specification statement community of the success'. It is a structure to investigate the man axis and friendship thoroughly, and the exchange between members is aimed at as a domain, and there is a fact that has been admitting various reactions and creativity. The comment 1000 times or more is delivered, and the member of the community also exceeds 2000 people referring to various attributes, and it fills it more

and more up to the present time. There is a track back on the HP site of a nationwide version 'Specification statement of the success', and is writing in the questionnaire. The characteristic of the community was analyzed from these facts. It has been understood that member's sense of values is analyzed from the acceptable attainment procession, and the type exists as two communities of a model and an economic rationality model by whom the structure it, and the man principle with interactive as "Place of knowledge" are investigated thoroughly. And, form 'Practice community's classifying, and ultimately to match both. It is thought to aim to continue and to maintain the learning function as a means to attempt solving the problem for that. I want to insist that "Place of knowledge" extends by systematizing and leaving it. The learning system was taken, and then, establishment assumed the enterprise to be a policy for 100 years, and assumed "Man lamplight ass" of "Sekigahara factory" and "One-making lamplight ass", etc. to be an ideal model by whom two poles of 'Man principle' and 'Economic rationalism' were united and investigated the case. And, to unite the model by whom the fulfillment of friendly relations between the man principle and the member was valued and the model by economic rationalism of the Anglo-Saxon system that attempted efficiency improvement and the integration at the business cycle harmonizing, the result of 'Practice community' was set in the hypothesis. It searched for the success factor of 'Practice community' from the verification of the hypothesis overall. When "Virtual place" and "Real place" are united, and the know how acquired from experience from the desire idea and the site from the ego participates in "Community" as knowledge individual, the understood success factor is shared there. And, it is thought that it is in the conversion to team wisdom, and taking the experience
wisdom as 'Learning system'.
